

TRACKLESS FLUSH SHEETS

COMMERCIAL/BUSINESS/SEPTIC-TANK APPLICATION

WHAT ARE TRACKLESS FLUSH SHEETS (TFS)

Trackless Flush Sheets (TFS) are 10-inch pleated ridge soluble paper products that dissolve in a toilet's or commode's water and release environmentally safe bacteria-eating enzymes that causes a chemical reaction breaking down flushed paper & waste products triggering them to break apart at the molecular level.

Our chemical engineers program the bacteria-eating enzymes to handle most waste material, adding special odor and hardwater buildup control products leaving all toilets fresh and clean in RVs, residential, and business environments.

TFS is able to reduce the amount of water (no need for multiple flushes) and expensive cleaning chemicals. TFS keep sewer systems functioning properly and helps eliminate expensive plumbing and septic repair costs. Each TFS is color-coded based on its intended use (commercial, residential, recreational).

HOW TFS WORK

The TFS is placed into the commode prior to use, they sink to the bottom of the bowl within 2-seconds creating a barrier/coating between the sides of the toilet and the future waste including feces, feminine & baby wipes, or any cellulose baser paper products that ends up in the toilet/Commode.

Flushing the toilet causes the flush sheet to fold up around the waste as it is being flushed. The bacteria-enzymes coat and start breaking down the waste and/or paper products ensuring maximum efficiency in the toilet and sewer lines, septic tanks, and holding tanks.

Our specially designed TFS bacterial products is the leading-edge solution for saving money and helping save the environment for recreation vehicle enthusiasts, homeowners, and businesses.

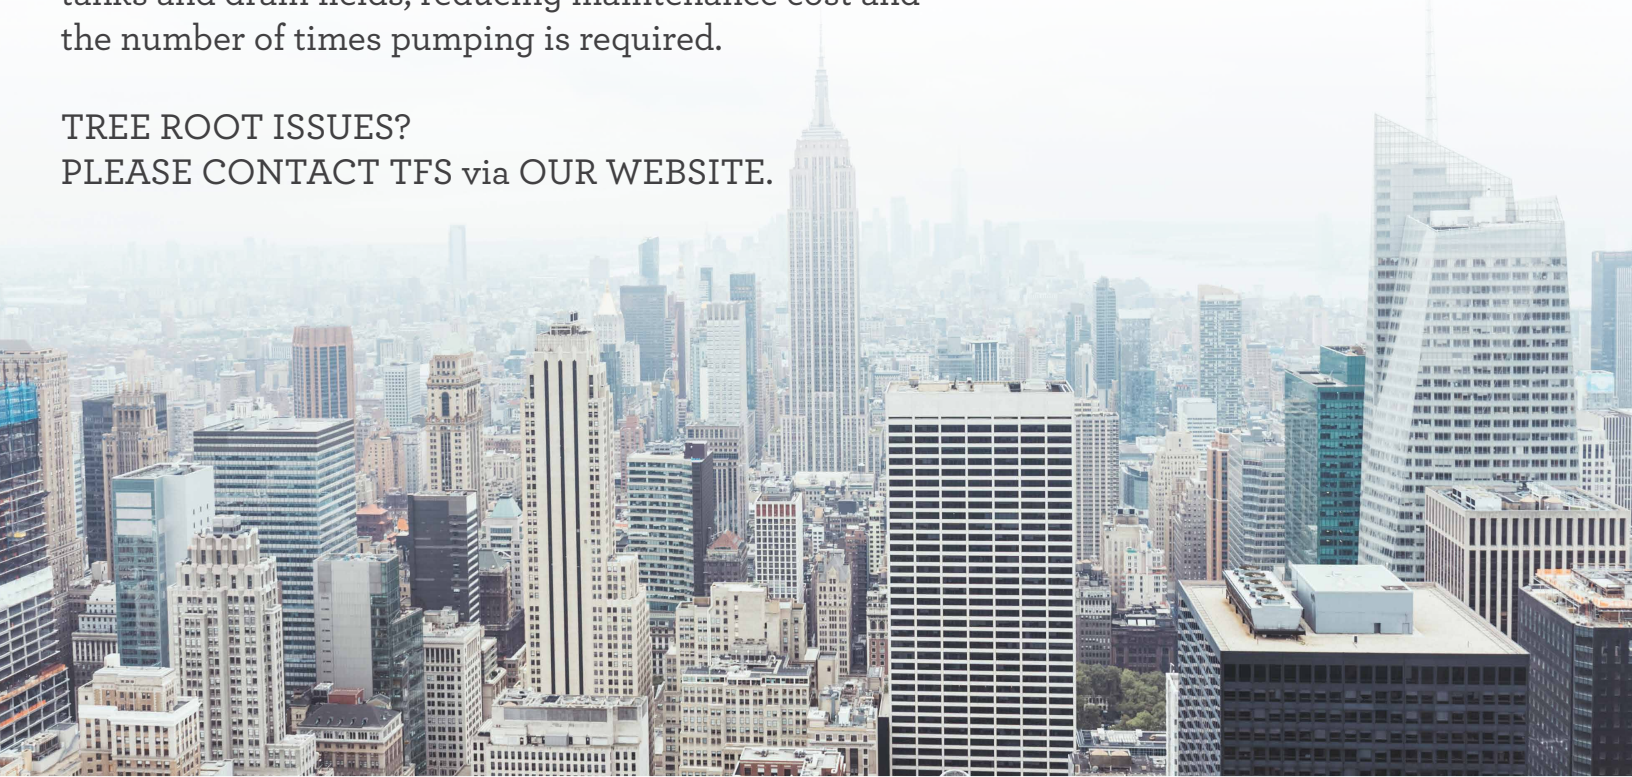

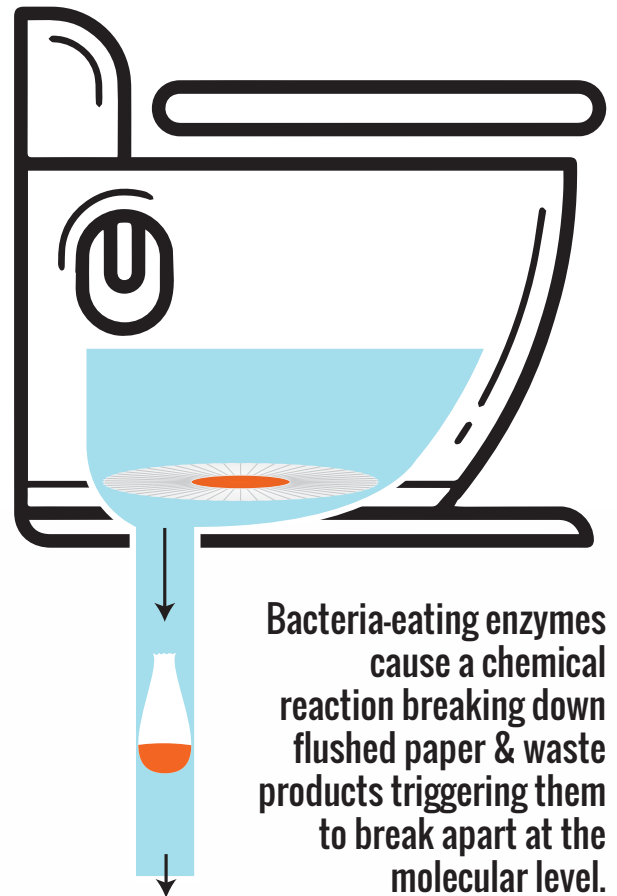

With blockchain technology and newly developed automated online ordering systems Homeowners, Business Owners, and Recreational Enthusiast place their orders online through the TFS shopping cart. No large inventory or storage space is required. The raw material is installed onto the printing press and stamping machine. TFS comes off the press, is packed then shipped out the door to the customer in any quantity ordered.

Commercial TFS provides the same benefits the Residential & RV TFS provides;

- Never be embarrassed with tracks left in the commode/toilet.
- Breaks down wipes that are clogging sewer lines
- Leaves commode/toilet smelling fresh & clean
- Eliminates hard-water ring build-up in the commode/toilet
- No toilet brush to deal with that's causing odors & germs
- No harsh & costly chemicals being flush, protecting our environment.
- TFS is an excellent choice for the planet!
- Keep sewer-lines clean & flowing free, with additional bacteria-eating-enzymes to treat septic-tanks.

There's no need to purchase other septic-tank treatment products, TFS provides environmentally friendly bacteria-enzymes to treat all types of septic tanks and drain fields, reducing maintenance cost and the number of times pumping is required.
