

TRACKLESS FLUSH SHEETS

RESIDENTIAL/RECREATIONAL APPLICATION

WHAT ARE TRACKLESS FLUSH SHEETS (TFS)

Trackless Flush Sheets (TFS) are 10-inch pleated ridge soluble paper products that dissolve in a toilet's or commode's water and release environmentally safe bacteria-eating enzymes that causes a chemical reaction breaking down flushed paper & waste products triggering them to break apart at the molecular level.

Our chemical engineers program the bacteria-eating enzymes to handle most waste material, adding special odor and hardwater buildup control products leaving all toilets fresh and clean in RVs, residential, and business environments.

TFS is able to reduce the amount of water (no need for multiple flushes) and expensive cleaning chemicals. TFS keep sewer systems functioning properly and helps eliminate expensive plumbing and septic repair costs. Each TFS is color-coded based on its intended use (commercial, residential, recreational).

HOW TFS WORK

The TFS is placed into the commode prior to use, they sink to the bottom of the bowl within 2-seconds creating a barrier/coating between the sides of the toilet and the future waste including feces, feminine & baby wipes, or any cellulose baser paper products that ends up in the toilet/Commode.

Flushing the toilet causes the flush sheet to fold up around the waste as it is being flushed. The bacteria-enzymes coat and start breaking down the waste and/or paper products ensuring maximum efficiency in the toilet and sewer lines, septic tanks, and holding tanks.

Our specially designed TFS bacterial products is the leading-edge solution for saving money and helping save the environment for recreation vehicle enthusiasts, homeowners, and businesses.

Residential & RV TFS is designed to solve many issues consumers deal with each day when using the commode/toilet. Placing a TFS in the commode before use will eliminate embarrassing tracks/feces left in the commode/toilet after use. By inserting a TFS in the commode/toilet before use reduces having to flush the commode several times after cleaning it with a toilet brush, saving time and money. When the consumer inserts TFS in the commode/toilet, it works to breakdown wipes and other cellulose based-paper products that are being flush, i.e., feminine & baby wipes. These wipe's clog and cause significant problems with waste-treatment plants in America and around the world. Using TFS on regular bases will have a tremendous impact on dealing with the clogging issues at all waste-treatment plants.

Benefits of using TFS:

- Never be embarrassed with tracks left in the commode/toilet.
- Breaks down wipes that are clogging sewer lines
- Leaves commode/toilet smelling fresh & clean
- eliminates hard-water ring build-up in the commode/toilet
- No toilet brush to deal with that's causing odors & germs
- No harsh & costly chemicals being flushed, protecting our environment.
- Helps in keeping sewer lines flowing, preventing paper build up in sewer lines causing clogging issues.
- TFS is an excellent choice for the planet!

TFS is the right choice for a clean odor-free facility for you, your family, friends, and guest invited into the home.

After the
flush

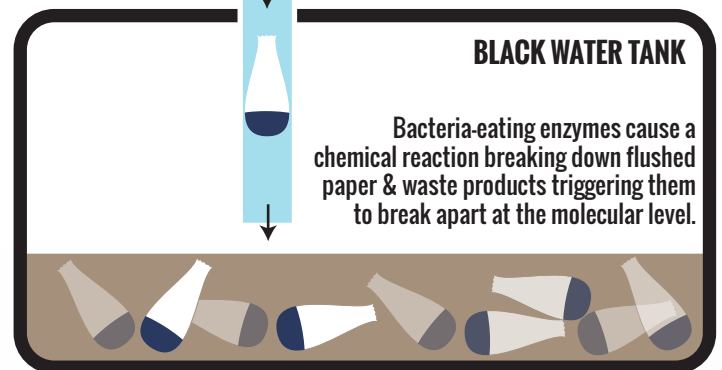

More than 21 million households in the United States use septic systems– not a public sewer–to trap and filter their toilet waste. TFS is able to help all homeowners save money and the environment!

RECREATIONAL VEHICLES (RVs)

Residential & RV TFS is designed to solve many issues consumers deal with each day when using the commode/toilet. Placing a TFS in the commode before use will eliminate embarrassing tracks/feces left in the commode/toilet after use. By inserting a TFS in the commode/toilet before use reduces having to flush the commode several times after cleaning it with a toilet brush, saving time and money. When the consumer inserts TFS in the commode/toilet, it works to breakdown wipes and other cellulose based-paper products that are being flush, i.e., feminine & baby wipes. These wipe's clog and cause significant problems with waste-treatment plants in America and around the world. Using TFS on regular bases will have a tremendous impact on dealing with the clogging issues at all waste-treatment plants.

Inserting TFS into the commode before use assures the holding tank is always treated with the correct number of bacteria-eating-enzymes.

According to the Recreation Vehicle Industry Association, there are over 9 million RV's on the road in the United States today. More than 355,000 travel trailers, motorhomes and folding camping trailers are sold each year. **TFS is able to help all RV owners save money and the environment!**
